

Carpenter

Our mission

Our mission is to produce fresh wooden houses and buildings to a very high standard.

Who we are

We are a family company and we add a personal touch to all our work. We are also fast and flexible which allows us to fulfil the customer's needs exactly. We want you to feel at home in our house!

What we do

We produce wooden houses in our own factory. We believe that concrete houses often feel stale. There's quite a difference when you enter one of our houses. Quite simply, you feel at home. It's the wood, of course, which makes the difference, as well as the attention to detail we bring to every project. What would you prefer to live in? A wooden house which lives and breathes made of natural materials, or a concrete house, dead and sterile. We think there's no choice!

Since we have our own factory, we can build houses in sections and take them directly to the site. Our approach allows us to assemble the house on site very

quickly. All this results in both high quality and low production costs.

The weather doesn't affect us. We can run our factory throughout the year and assemble on site whenever the customer needs us.

But we don't stop there, with single storey houses. We also build larger properties that contain many apartments of different sizes. These larger buildings are also made of wood, built on the principle of huge wooden beams.

*“Quite simply,
you feel at home.”*

We build custom homes

The homes we build are highly customizable. Our wooden frame construction can be adapted in many ways. Some customers might want roofs covered with solar panels energy generation. Others may want regular tiles.

We are highly flexible and adapt to needs fast. This is what keeps us at the forefront of construction. We don't just follow the standards of wooden houses that are generally found out there.

We have our own engineers who do the tailored work which is required for our type of highly adaptable homes.

“Quite simply, we want to help our customers make the world a better place.”

We meet changing demands quickly

We see an increasing demand for houses built of wood now and in the future. People are rapidly becoming more aware of the environment in which they live. They are also very concerned about the legacy they will leave to future generations. Quite simply, we want to help our customers make the world a better place.

There are even plans to build skyscrapers based on wooden construction principles. Wood is becoming a major factor in future construction design, and we are well placed to serve these needs with our speciality houses and buildings.

We are ambitious

With the experience we have and our extensive know-how, we hope to bring wooden framed homes to parts of the world where they are not as common as here in Scandinavia. At the same time, our long-term goal is to expand. We plan to construct a second factory with the environment in mind to produce houses people can call home.

Our high standards

Our specialty is building environmentally friendly homes to high Swedish standards and with materials from Swedish forests. That's why we choose wood over concrete. Concrete is very high in carbon dioxide emissions and has a more severe impact on the environment than wood from Swedish forests. According to Swedish law, more trees must be planted than felled for production. We embrace this principle.

Our philosophy

Our philosophy is that when we build for you, we build a home for you and your family - not just a house. We give people the chance to guide the construction of their homes. The home they choose to build reflects the people who live in them. And this is what keeps us going. We make sure people have homes to live in that are affordable and personal. Homes where a family can grow together and get the feeling "This is where I belong" as they walk through the door.

Our company history

Our history dates back to 1992 when our founder, Enes, arrived in Sweden. In 1997 he decided that it was time for something different, so he started Carpenter, his own construction company. Enes saw a need for a fresh innovative approach in building houses, and he put all his efforts into his work. Back then it was a one man business, but the driving force that Enes put into the activity is still to be found in all our operations.

We've made a lot of progress since those days. We have our own modern factory where we build all our customer's homes, and we are now one of the most established construction companies in the Västerås area.

"We have our own modern factory."
